

FIND YOUR WAY

with Virtual Orienteering 

DOWNLOAD

Maprun6 is free and available to download on Android / iOS

FILL IN DETAILS

Fill in some simple details about yourself to register

SELECT 'EVENTS NEAR ME'

Choose the FYW course to try & click 'Go To Start' to see the map. You're now ready to start your course!

FIND YOUR WAY

to setting up your phone

CHARGED

Having a low battery may turn on 'battery saver' mode which will turn off GPS (needed)

LOCATION

Allow Maprun6 to 'Access Location' whilst using the app

PERMISSIONS

Allow Maprun6 to save files (maps) to your device

BACKGROUND

If you lock your screen allow 'background running of the app'

[Settings](#) > [Apps](#) > [Maprun6](#) > [Battery use](#)

LINEAR

around the course

TIP

The purple lines joining the numbers together show the shortest way between them, can you find the closest, safe route to the line?

START

Click 'Go to Start' and look for the triangle. When you are ready go into the triangle and wait until it turns green

TIP

Avoid passing through the Finish whilst visiting controls on the course. Doing so will end your attempt!

CONTROL 1

Look for a small purple circle numbered 1. Make your way to it via the shortest, safe route you can take. Wait until it turns green.

CONTROL 2, 3, 4 +

Make your way to the next number, make sure you visit the controls in number order!

FINISH

After visiting all controls head to the double circle (FINISH) to complete the course. Wait for it to turn green.

click 'show results' to see how you did!

SCORE COURSE

around the course

TIP

In a Score course you are trying to score the highest score possible in a time frame. If you are late to finish you lose points! Each control has a points value attached to it. You are free to go to whichever controls you wish to in any order.

③ ①

⑦

START

Click 'Go to Start' and look for the triangle. When you are ready go into the triangle and wait until it turns green

NEXT STEP

Look for small purple circles that are numbered. Make your way to your first circle via the shortest, safe route you can take. Wait until it turns green.

TIP

Avoid passing through the Finish whilst visiting controls on the course. Doing so will end your attempt!

SCORING

Visit any control you wish to build up your score. When it turns green you have collected those points.

FINISH

After visiting all the controls you wish to, head to the double circle (FINISH) to complete the course. Wait for it to turn green.

click 'show results' to see how you did!

What's the best way to run the courses?

Whilst you may initially wish to look at your phone as you navigate the courses to see how the app works, we would recommend putting your phone in a secure pocket, bumbag or rucksack whilst running the courses. This has the advantage of keeping your hands free to fold the map and thumb your location as you move.

I'm in the right place. Why is there no beep?

Sometimes the GPS signal can be a little inaccurate. Try moving in a circle around the control location. If you've checked the map and you're sure you are in the correct place then continue on the course. Use the HITMO option later (see below).

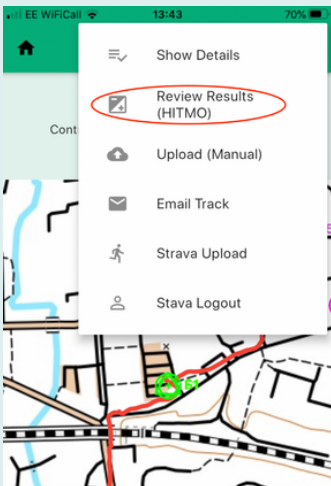

What if I make a mistake? and Why am I hearing extra beeps?

If you notice that you have gone astray, just go back to the last place where you know you were correct and continue the course. Depending on your choice of route, you may also occasionally pick up an extra control as you navigate your course. As long as you visit each control on your course in the correct order any extras are disregarded.

What to do if your phone doesn't register a control but you are sure that you visited it...

HITMO - "Hey, I Think the GPS Missed One"

This is a function that everyone can use to claim controls that did not register.

When viewing the results, tap the three bars symbol on the upper right of the screen. Tap "Review Results (HITMO)".

This displays your results showing credited controls in green and near-misses in red. There is also a Tolerance setting.

Tick the check-box beside a near-miss that you wish to claim and increase the tolerance until that control is accepted (turns green).

Tap "Submit revised result" at the bottom of the screen. Both the original result and the revised result can be seen on the leaderboard.
